USSR SHIPBUILDING CONSTRUCTION ABROAD

The USSR is at present having shipbuilding done in Hungarian and Rumanian shipyards.

In Hungary, two 1,800-ton ships which were damaged during the war have been delivered for reparations. In Budapest, another 1,800-ton ship having a draft of 4 meters is under construction. This ship, which will be reinforced for navigation in ice, will be taken to Braila, where its superstructure will be completed. It should be sent to Vladivostok.

Rumanian shipyards have received an order for the construction of a Norwegian model of thirty small wooden trawler-type vessels. These ships, 15 meters long, should be equipped as magnetic mine sweepers.
